Summary

Full-stack developer building web applications and AI tools with **React, Next.js, TypeScript, Python, and REST APIs**. Contributed merged fixes and features to open-source AI software, with hands-on work in authentication, API integration, and regression testing.

Education

Central University of Himachal Pradesh Master of Computer Applications (MCA)	2024 – 2026
Government Post Graduate College Una (HPU) B.Sc. in Physics, Computer Science and Mathematics	2021 – 2024

Technical Skills

Languages: Python, JavaScript, TypeScript, SQL, C

Frontend: React, Next.js, Tailwind CSS, Redux, Zustand

Backend & Data: Node.js, Express.js, FastAPI, Django, REST APIs, Socket.IO, MongoDB, MySQL

Cloud & Tools: Docker, AWS EC2, Vercel, Render, Git, Postman, Codex, Claude Code

Work Experience

AI Trainer <i>Handshake AI Fellowship – Freelance</i>	Jul 2026 – Present <i>Remote, India</i>
- Develop and evaluate domain-specific prompts for LLM reasoning, accuracy, instruction following, and task performance. - Review AI-generated responses and provide structured evaluation feedback, supported by independent research and fact verification.	

Open-Source Contributions

Hermes WebUI <i>Python, agent caching, regression testing</i>	PR #7398 Merged Sep 2026
- Fixed chat startup crashes caused by treating callable API credentials as strings; added stable cache-signature handling without invoking the credential source. - Added helper and chat-worker regressions that reproduced the failure; verified the fix with 42 tests and 11 subtests passing across focused and neighboring suites.	

Projects

CUHP Devs <i>Next.js, TypeScript, Express.js, MongoDB, Zustand</i>	GitHub Live Demo
- Contributed authentication and onboarding to a student developer community, addressing login/logout issues and inconsistent user state across pages. - Implemented email-or-student-ID sign-in, updated user schemas and validation, and connected profile setup to APIs and shared Zustand stores.	
Socratic AI <i>Next.js, TypeScript, Express.js, FastAPI, MongoDB, Groq</i>	GitHub Live Demo
- Built chat workflows for a team tutoring project designed to guide students through questions; connected the web app and Express APIs to a FastAPI/Groq service with saved conversation history. - Addressed session and AI-service failures with authentication-token handling, logout cleanup, bounded provider requests, and explicit API error responses.	
OpenEnv Bug Triage <i>Python, FastAPI, Pydantic, Docker, pytest</i>	GitHub Live Demo
- Built a repeatable environment to evaluate AI agents on bug triage: classification, assignment, duplicate handling, and escalation across three deterministic difficulty levels. - Implemented typed actions, state transitions, programmatic graders, and a web UI; added tests for API contracts, reset behavior, invalid actions, episode limits, and score bounds.
